■ Alarm output control mode description

N(MANUAL):When count value equal setting value the relay ON & continue count until reset by panel or connect terminal then relay OFF & count value return to RST setting value
 R(RETURN):When count value equal setting value the relay ON & continue count until relay action time out then relay OFF & count value return to RST setting value
 C(CONTINUE):When count value equal setting value the relay ON & count value return to RST setting value then continue count & relay action time out the relay OFF
 N/R/C control mode is according to AL1 setting value
 WARN =YES:When count to Pre-Warn value[AL1-AL2] RELAY 2 ON,Count to AL1 value RELAY 1 ON and run N,R,C
 WARN = NO:AL1 and AL2 is setting Alarm value independently.
